# SHUN DE-ESS | DETECTOR & ATTENUATOR TEST

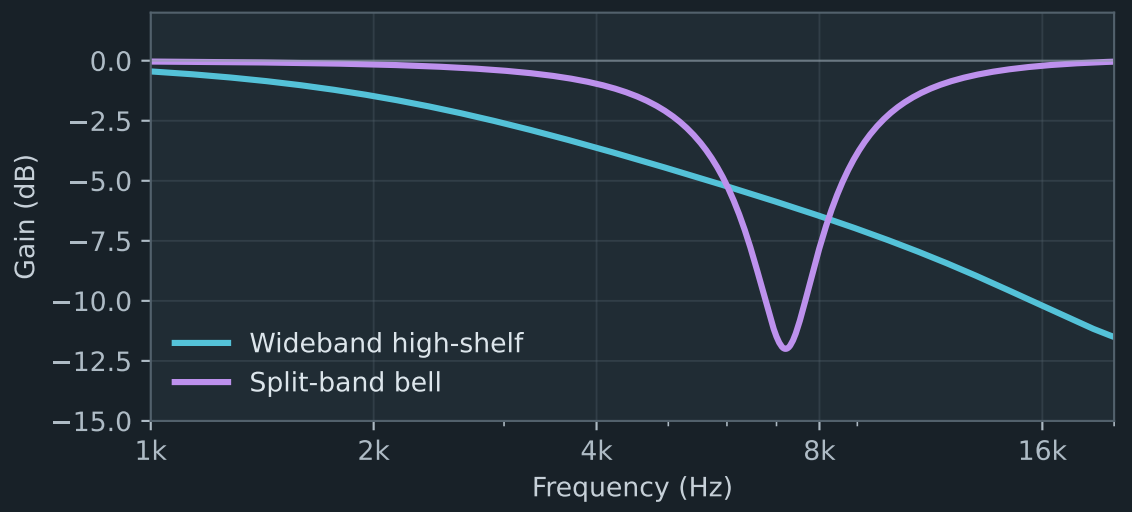

Deterministic 48 kHz mock signal: broadband noise + 500 Hz body + late 7.8 kHz detail tone

Detector Listen selectivity: 31.5 dB at 7.8 kHz vs 500 Hz · Detector Q 2.2 · Attenuator Q 2.8 · Maximum depth 12 dB

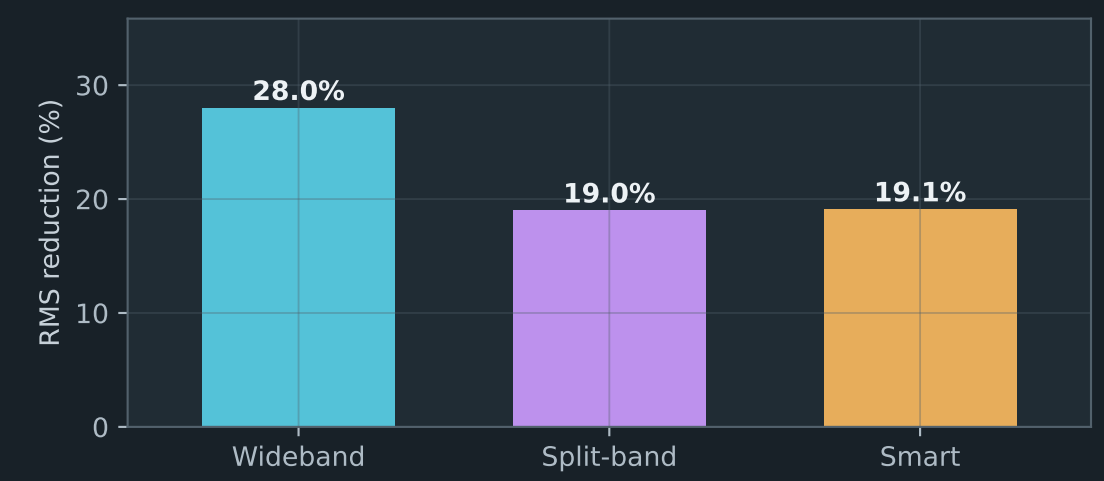

## Detector band-pass

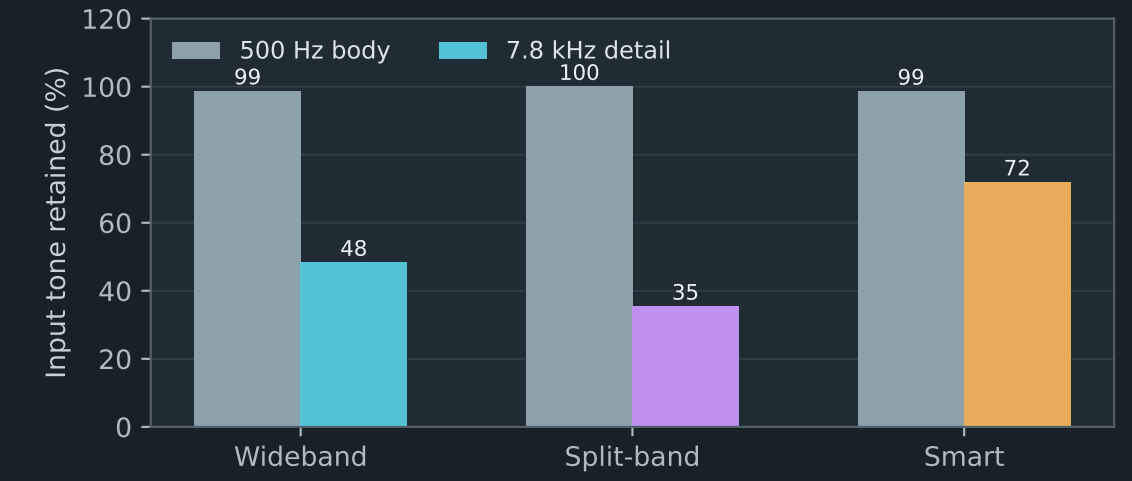

## Attenuator filter shapes

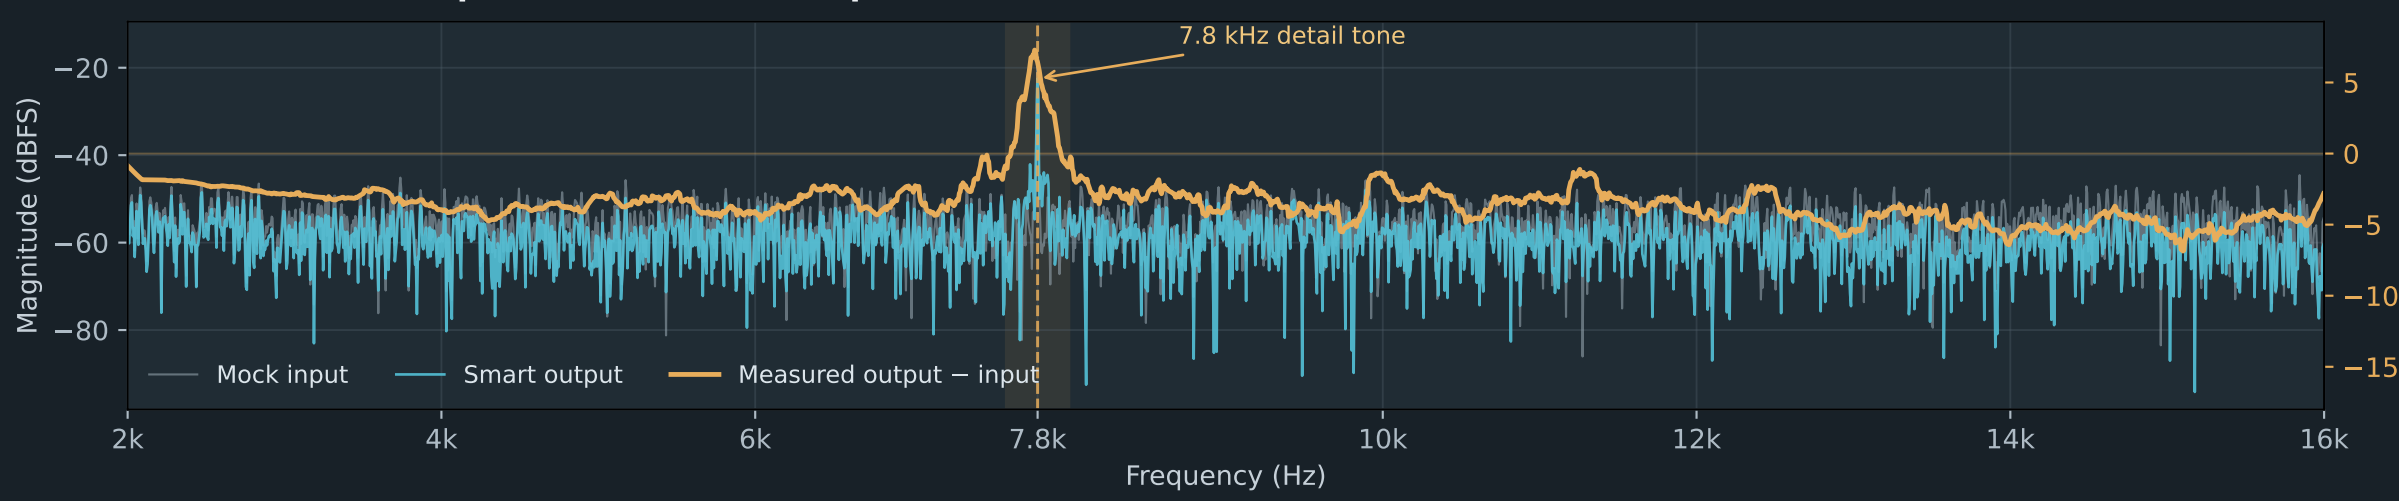

## Broadband attenuation

## Tone retention

## Smart measured spectrum · detail tone present

**Smart keeps 71.9% of the 7.8 kHz detail tone vs 48.3% in Wideband (+23.6 points).**

It retains 98.6% of the 500 Hz body. Bottom panel plots measured Smart input/output spectra and their difference.
