SHUN DE-ESS | DETECTOR & ATTENUATOR TEST

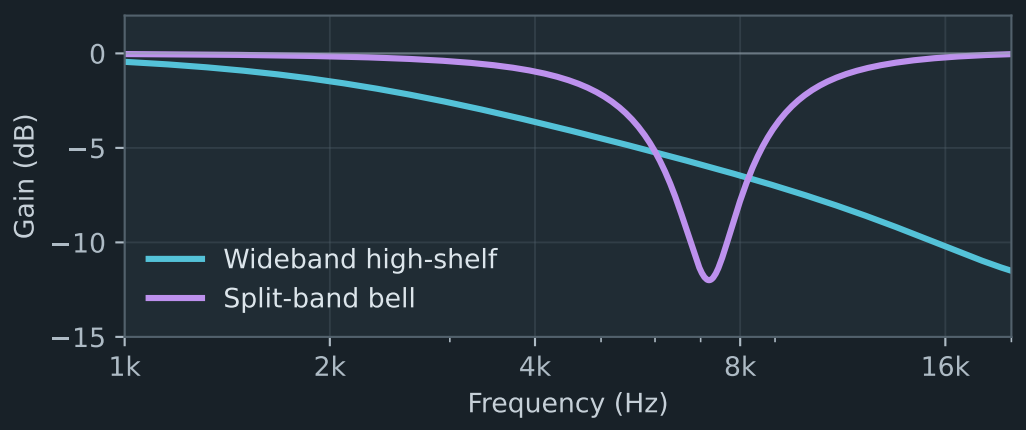

Deterministic 48 kHz mocks: fixed detail for Q sweep; swept tone and bursts for rolling analysis

Detector Listen selectivity: 31.5 dB at 7.8 kHz vs 500 Hz · Detector Q 2.2 · Attenuator Q 2.8 · Maximum depth 12 dB

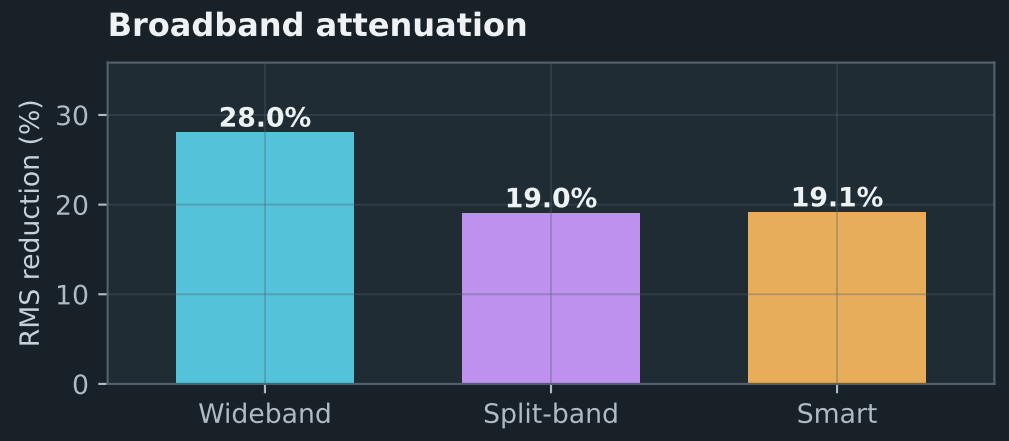

Detector band-pass

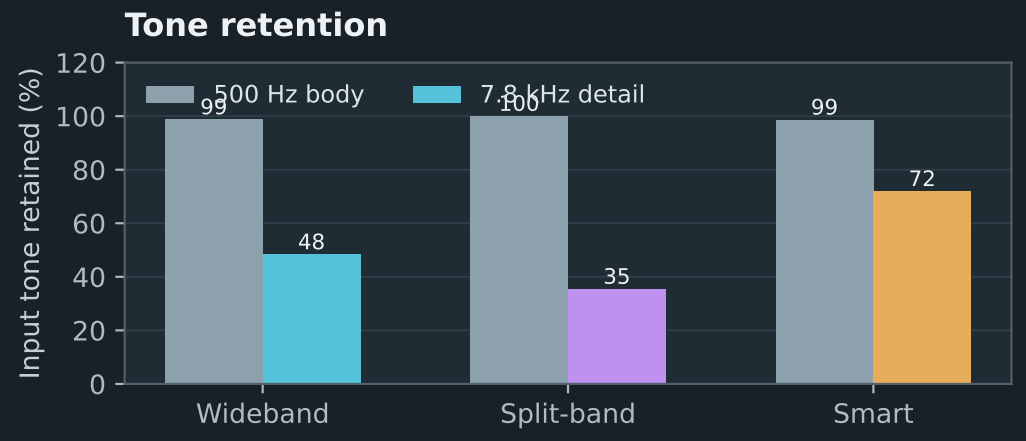

Attenuator filter shapes

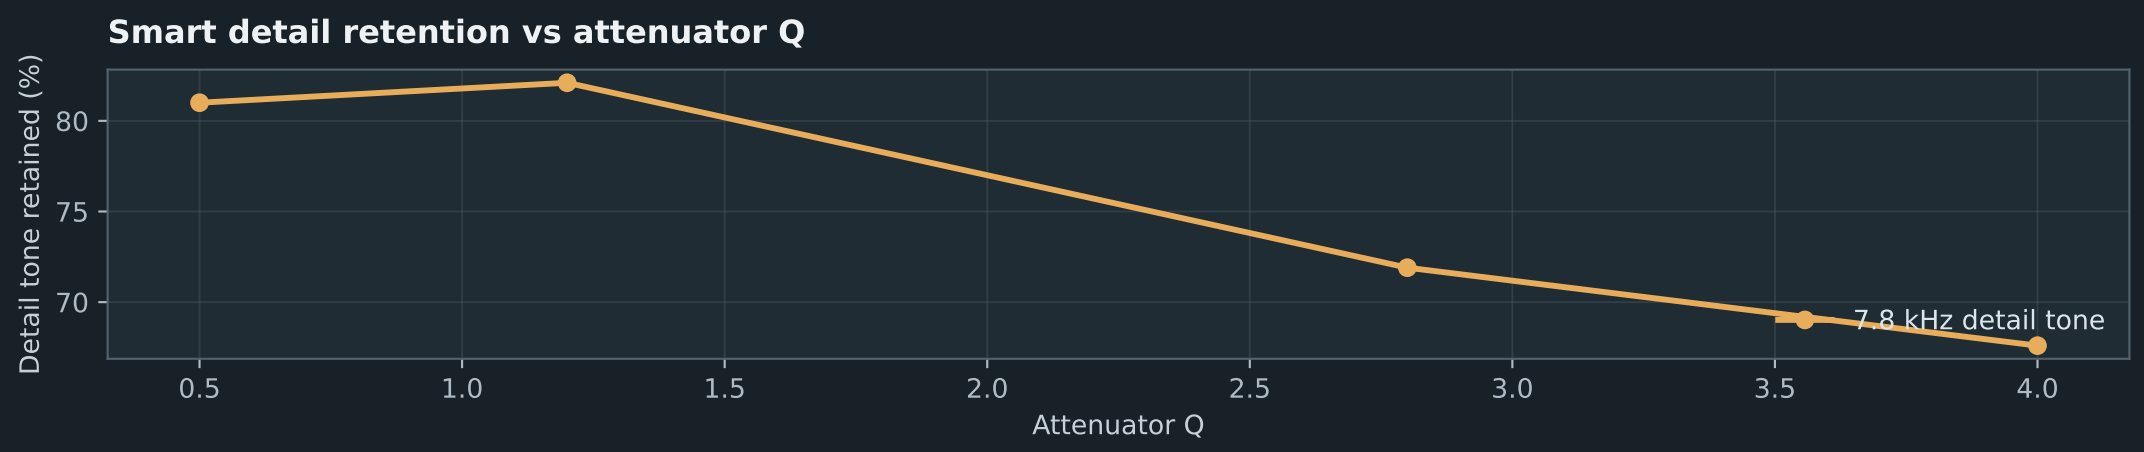

Broadband attenuation

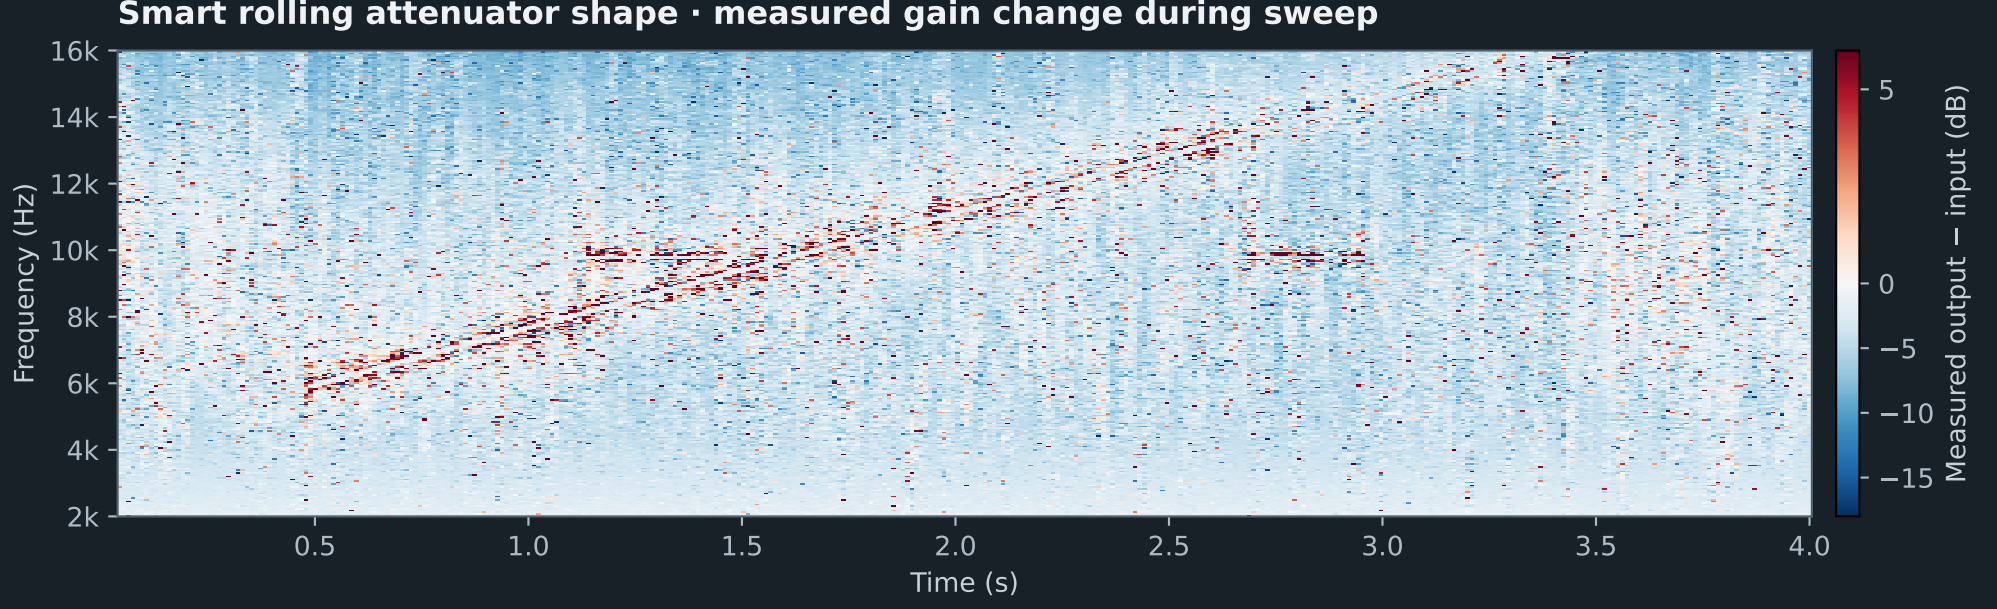

Tone retention

Smart detail retention vs attenuator Q

Smart rolling attenuator shape · measured gain change during sweep

Smart keeps 71.9% of the 7.8 kHz detail tone vs 48.3% in Wideband (+23.6 points).

It retains 98.6% of the 500 Hz body. Bottom panel maps measured Smart gain change over frequency and time: cuts below 0 dB, restored detail above 0 dB.
