SHUN DE-ESS | DETECTOR & ATTENUATOR TEST

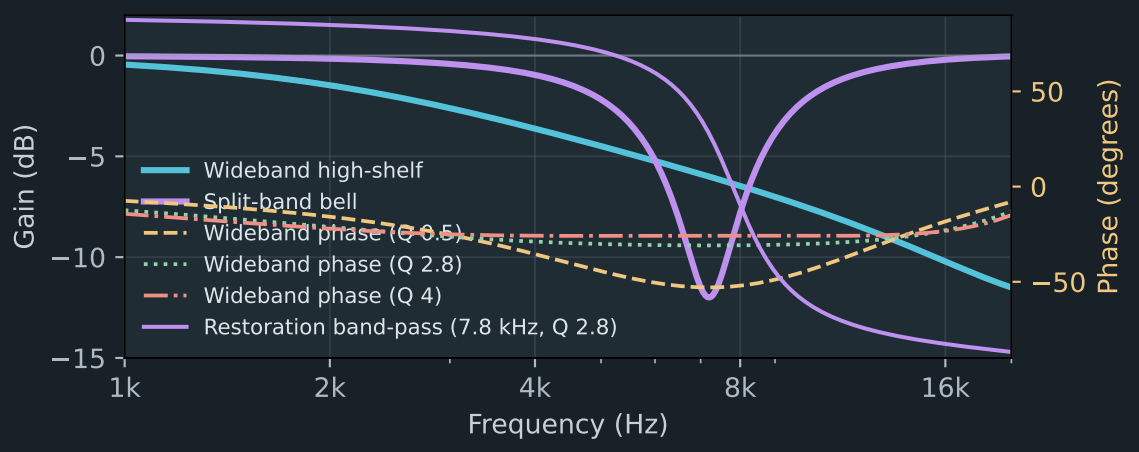

Deterministic 48 kHz mocks: fixed detail for Q sweep; swept tone plus gated sibilance noise pulses

Detector Listen selectivity: 31.5 dB at 7.8 kHz vs 500 Hz · Detector Q 2.2 · Attenuator Q 2.8 · Maximum depth 12 dB

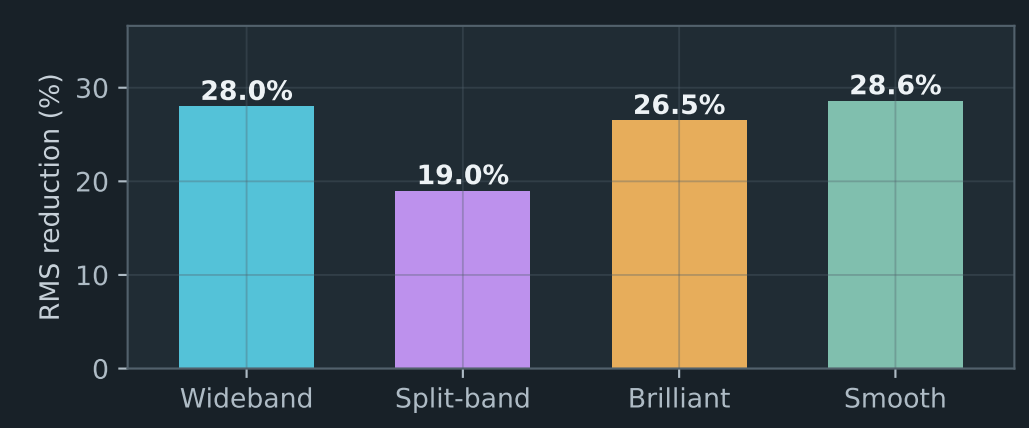

Detector band-pass

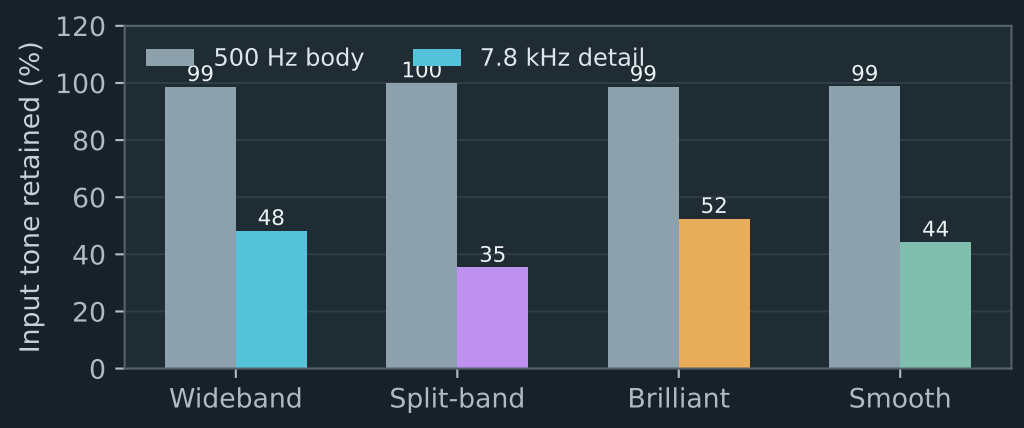

Attenuator filter shapes

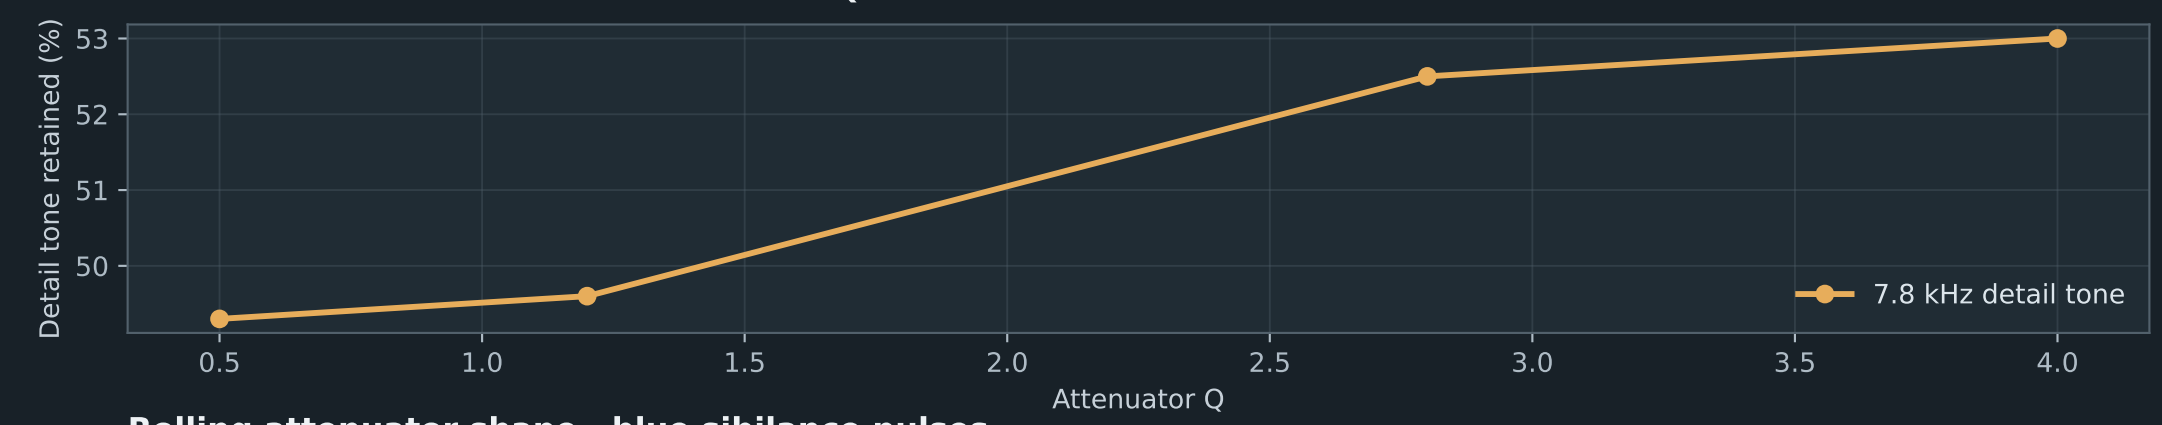

Broadband attenuation

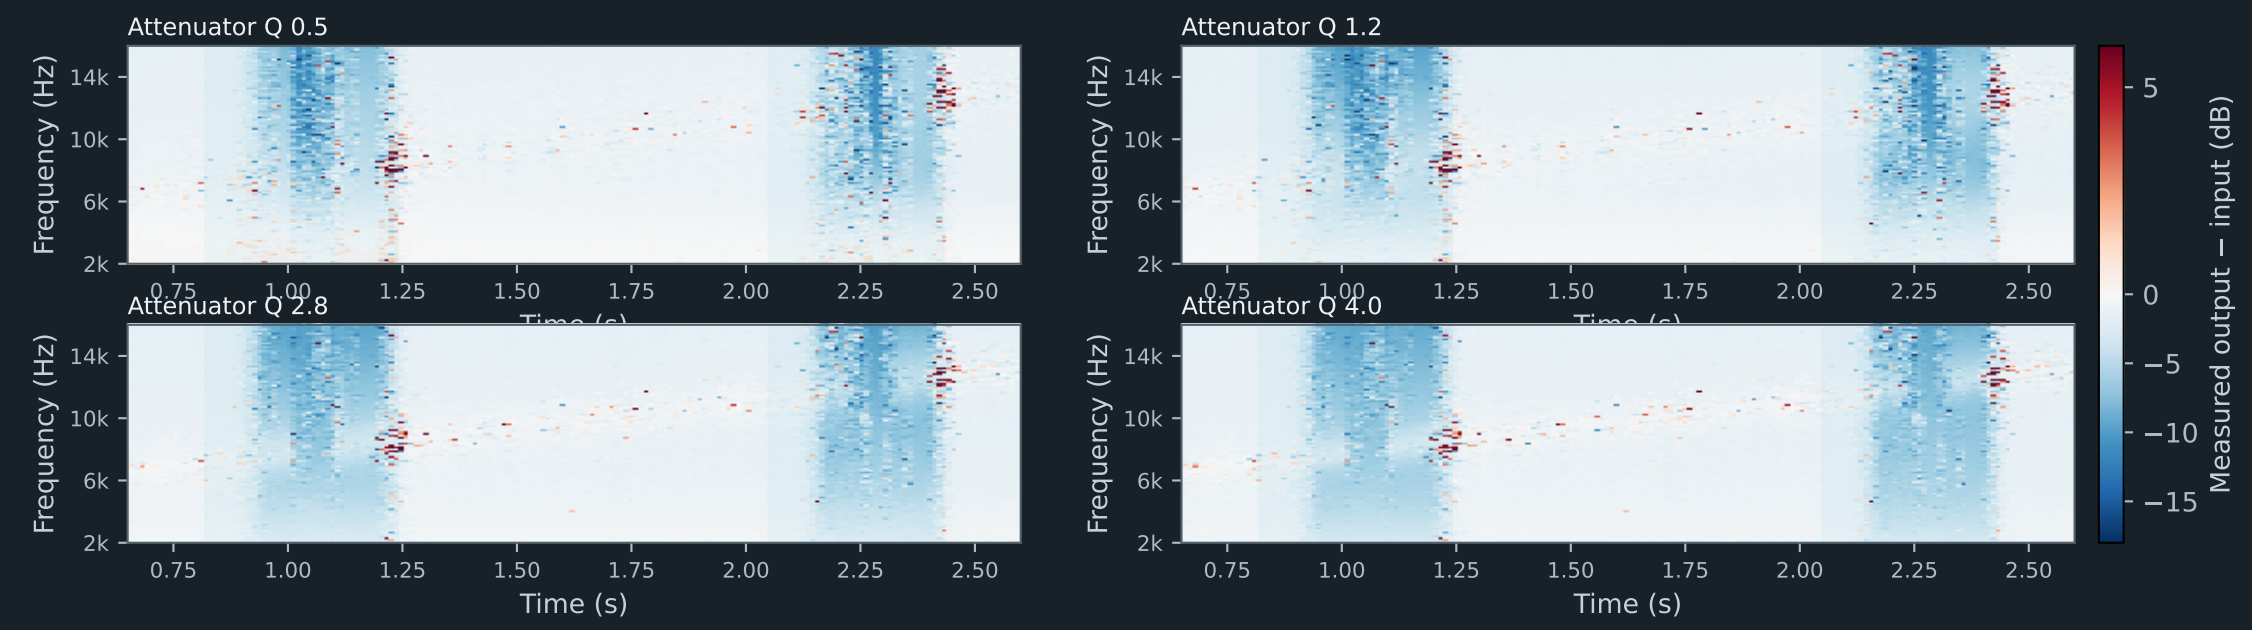

Tone retention

Brilliant detail retention vs attenuator Q

Rolling attenuator shape · blue sibilance pulses

Brilliant keeps 52.5% of the 7.8 kHz detail tone vs 48.3% in Wideband (+4.2 points).

Pulse band change (4.5–12 kHz; negative = attenuation): Q 0.5 -1.25 dB Q 1.2 -2.06 dB Q 2.8 -3.68 dB Q 4.0 -4.15 dB. Blue is attenuation; red is gain restoration.
